

SK-CT90 BOTTLE CAP TIGHTENER

The SK-CT90 is designed as a bench mount, semi-automatic cap tightener machine that reliably and accurately tightens most continuous thread caps (including child-resistant caps). This air-powered capping machine controls torque with an air regulator. The universal bottle guide accurately centers round, square, rectangular, oval, or odd-shaped containers. The tightener assembly is attached to a support stand, which can be mounted to a tabletop or a semi-automatic filler.

Features

- Air operated
- Can achieve up to 30 containers per minute
- Handles plastic and metal caps up to 120 mm
- Special shells and inserts allow for running yorkers, sport caps, and droppers
- Container Sizes: Up to 6" diameter and up to 13" high
- Easy and fast changeovers for different caps and bottles
- Variety of chucks and liners available
- Small footprint

Options

- Dual thumb switches for safety when running short bottles

Specs

Air Requirements:

- 1.5 cfm @ 70 – 90 psi

Overall Dimensions:

- Length – 13"
- Width – 10"
- Height – 34"
