

SK600 CAP TIGHTENER/ RETORQUER

A semi-automatic, straight-line, six spindle machine, the SK600 Cap Tightener & Retorquer can handle all standard cap torquing applications. It is perfect for ensuring a tight, consistent seal on just about any threaded cap and for tightening pumps and trigger sprayers where automatic insertion of the pumps and triggers is not feasible. The retorquer ensures you torque caps properly when used after an induction sealer. The machine is also available as a semi-automatic press-on capper. You can upgrade your SK600 Cap Tightener & Retorquer to a Fully Automatic Capping Machine as your business grows.

Features

- Six spindles for optimal cap control
- Two sets of mechanical clutches for precise application torque
- Heavy-duty stainless-steel frame
- No change parts for most caps
- Speed: 100+ BPM depending on cap size and conveyor line speed
- C-Frame design for easy integration with existing conveyor
- Convenient height adjustment allows handling containers with a height differential of 13" from shortest to tallest
- Caster mounted for portability
- Single knob adjustment to move gripper belts on center
- Easily accessible front knobs to adjust spindles on center
- Flexible to handle 8 mm to 120 mm diameter caps
- Handles plastic, glass, and metal bottles up to 8" in diameter
- Upgradeable to automatic capper as product demands increase
- Industry-leading 3-year parts guarantee, excluding belts and discs
- Superior service ensures COMPLETE CUSTOMER SATISFACTION

Options

- PLC-controlled non-contact torque monitoring
- Stainless-steel gripper belt assembly pulleys and bearings
- Stainless-steel clutches
- Pneumatic clutches
- Quick changeover package, including counters and scales
- Power height adjustment
- Capper guarding package with safety interlocks
- NEMA 4 controls and switches
- Enhanced corrosion resistance coatings
- Hazardous location construction

Specs
